			ART UNIT 2612	PAPER NUMBER
			MAIL DATE 12/18/2007	DELIVERY MODE PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b>		<b>Applicant(s)</b>	
	10/507,538		KUNKAT ET AL.	
	<b>Examiner</b>		<b>Art Unit</b>	
	Nabil H. Syed		2612	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 21 September 2007.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. The following is a response to RCE filed on 9/21/07. Amendments received on 8/22/07 have been entered. Claims 1-17 are pending.

#### **Drawings**

2. The drawings are objected to because conventional features illustrated in the drawing as rectangular boxes must be labeled. See 37 CFR 1.83(a). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Labels are required on the boxes because the boxes are not symbols for conventional feature.

**Claim Rejections - 35 USC § 103**

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Strong et al. (US 2003/0007473) in view of Bonneau et al. (6,577,229).

4. Referring to claims 1, 5, 9 and 14, Strong teaches a system, as shown in Fig. 2, comprising a local positioning system (LPS), which includes a plurality of interrogators 6 (i.e., communication stations) coupled to a plurality of antennas 5 that communicate with each other and with tags 2 (i.e., transponders) (see Sections [0045]-[0046], and [0054]-[0055]). Per Strong, interrogator 6 communicates with tags 2 using spread-spectrum (i.e., an interrogator-tag protocol) (see Section [0096]); thus interrogator 6 must include a first protocol-executing means. Strong further teaches that interrogators 6 are directly connected to an Ethernet local area network (LAN) and communicate with each other over the LAN using the Ethernet protocol (i.e., an interrogator-interrogator protocol) (see Sections [0047] and [0054]-[0055]); thus interrogator 6 must also include a second protocol-executing means. Though not expressly taught, Strong's interrogator

6 must have an integrated circuit and comprising at least (1) a radio frequency (RF) transmitter and receiver (or an RF transceiver) and a microprocessor that form a first protocol-executing means in order to communicate with tags 2 via spread-spectrum and (2) an Ethernet interface (i.e., a second protocol-executing means) in order to communicate with other interrogators 6 via the LAN. Strong further discloses that the interrogator communicate with other interrogators and tag wirelessly (via interrogator A communicating wirelessly with interrogator B and a tag; see fig. 7)

Even though The Examiner believes that Strong teaches that a reader communication unit is able to communicate with a tag unit and further communicate with another reader unit (via 802.11b access point 3 communicating with tag 2 and another 802.11b mobile device; see fig. 2) using a processor MAC and Strong further discloses that the elements of the reader communication unit 3 can be duplicated via making a separate receiving unit for tag protocol (see paragraph [0141]). Even though the description is not fully explained but one of ordinary skill in the art would be able to realize that Strong does include first signal processing means and second signal processing means.

In order to further support the Examiners point of view, Bonneau discloses a communication station (via smart card communication device (SCCD) 104); see fig. 2; also see col. 67, lines 50-67) comprising a RF circuit 214, DSP 210 and DSP EEPROM 30. Bonneau discloses that RF circuit 214 and DSP 210 perform modulation and demodulation using the International Organization for Standardization (ISO) Type A smart card communication protocol (i.e., at least one transmission parameter) or the

ISO Type B smart card communication protocol (i.e., at least One other transmission parameter) to enable communication between SCCD 104 and a Type A or B smart card 106 (see Col. 2, lines 17-37; Col. 7, lines 1-13; Col. 9, lines 39-45; Col. 10, lines 14-23 and 25-38; Col. 12, lines 51-67; Col. 13, lines 1-22, 36-38, and 46-67; and Col. 14, lines 1-57); thus Bonneau's RF circuit 214 and DSP 210 form (a) a first signal-processing means that processes signals and enables signals to be processed when SCCS 104 communicates with a device having one type of protocol (b) a second signal-processing means that processes other signals and enables other signals to be processed using at least one other transmission parameter when SCCS 104 communicates with a other device having a different communication protocol. Bonneau discloses a transmission means connected to the first and second signal processing means to transmit and receive signals from different devices having different protocols (via antenna assembly 216; see fig. 2)

From the teaching of Bonneau it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the interrogator of Strong to include two signal processing means to process the signals received from first protocol executing means and second protocol executing means as taught by Bonneau in order to improve the interrogators so they can communicate with devices having different communication protocols through a single port (see col. 4, lines 37-39 and col. 2, lines 65-67).

Regarding claims 2, 6, 12, 13, 16 and 17, Strong teaches that interrogator 6 generates a 2.4 GHz field (i.e., an energy-supply signal) to power tags 2 over the air

each time the interrogation starts (i.e., the interrogator-tag protocol begins) (see Sections [0096]-[0097]). Strong also teaches that interrogators 6 communicate with each other over an Ethernet LAN (see Section [0047]). Though Strong fails to expressly teach that interrogator 6's second protocol-executing means having a synchronizing signal generating means generating a synchronizing signal each time the interrogator-interrogator protocol starts, a message or frame generated by interrogator 6 includes an eight-byte preamble that enables a receiving interrogator 6 to lock onto the transmitting interrogator 6's timing on a frame-by-frame basis; thus the preamble functions as a synchronization signal, and interrogator 6's second protocol-executing means must have a synchronizing signal generating means. Though not expressly taught, Strong's interrogator 6 must have an integrated circuit and comprising at least (1) a radio frequency (RF) transmitter and receiver (or an RF transceiver) and a microprocessor that form a first protocol-executing means in order to communicate with tags 2 via spread-spectrum and (2) an Ethernet interface (i.e., a second protocol-executing means) in order to communicate with other interrogators 6 via the LAN.

Regarding claims 3 and 7, because Ethernet devices only transmit when there is information to be transferred instead of transmitting continuously, as required by some network protocols, Strong's interrogators 6 conserve power by transmitting to other interrogators 6 only when necessary.

Regarding claims 4 and 8, Strong teaches that interrogator 6's first protocol-executing means handles a interrogator-tag protocol that communicates with a plurality of tags 2 (see Fig. 2 and Sections [0045] and [0055]-[0056]). In addition, Strong teaches

that a master interrogator 6 sends a "turn on" command to a slave interrogator 6 seven milliseconds early (i.e., as early as possible) to compensate for a seven-millisecond delay between the master and slave interrogators 6 (see Section [0055]).

Regarding claims 11 and 15, Strong teaches that the LPS tags are considered RFID tags (see section [41], lines 19-20).

### **Response to Arguments**

5. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nabil H. Syed whose telephone number is 571-270-3028. The examiner can normally be reached on M-F 7:30-5:00 alt Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Zimmerman can be reached on (571)272-3059. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
